

MADE IN ITALY

CORRUGATED-PAPER INDUSTRY

STRENGTH

Our machines are made to last under heavy conditions

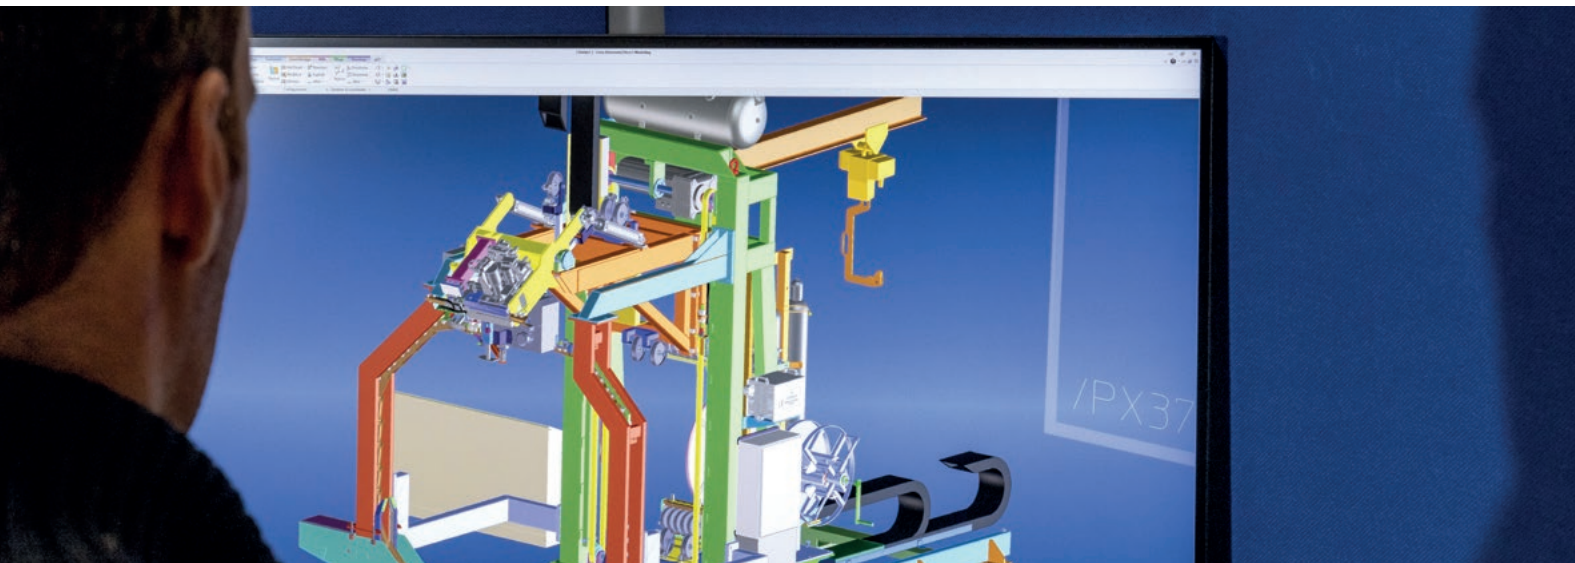

To maximize the performance of the strapping machine we recommend our wide range of PET strap made by

FLEXIBILITY

Tailor-made projects for any application

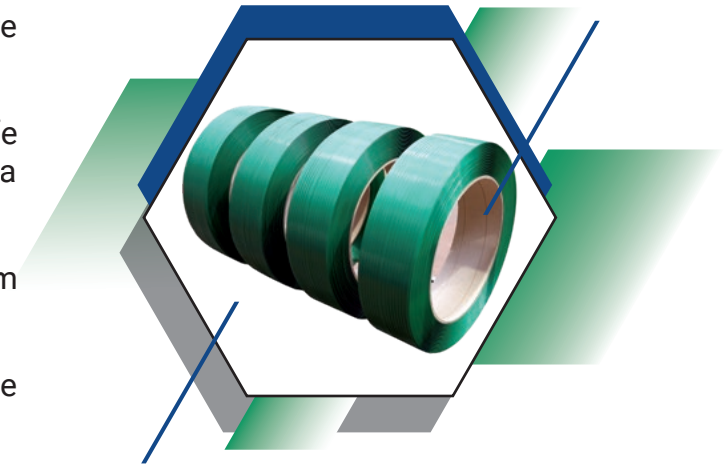

The high mechanical qualities of polyester strap ensure a solid and secure packaging.

Our high quality PET strap ensures fast and safe product handling. The high elasticity guarantees a stable and solid packaging.

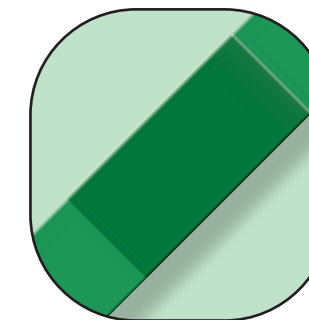

ITISTRAP strap sizes: 8-32 mm wide x 0.4-1.52 mm thick, with a breaking strength up to 2100 daN.

Itistrap contributes to keep our planet clean, we use 100% recycled PET.

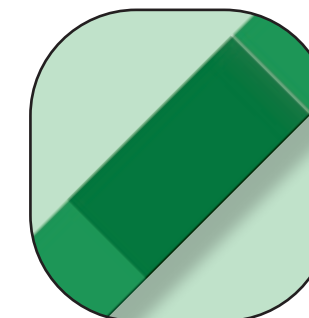

EXPERTISE

Our know-how transforms customer's needs into solutions

THERMO PET STRAP

FRICTION PET STRAP

CORRUGATED SHEETS

PAPER SACKS - BOXES

Compression strapping machines available with single or double heads system to maximize throughput. Equipped on request with integrated turning table or lift rotary cross to rotate and apply the straps on all the sides of the loads. Max compression up to 3000kg, strapping interaxle and other features to be customized on customer's needs and to guarantee reliable performance.

Compression strapping machine duly customized for:

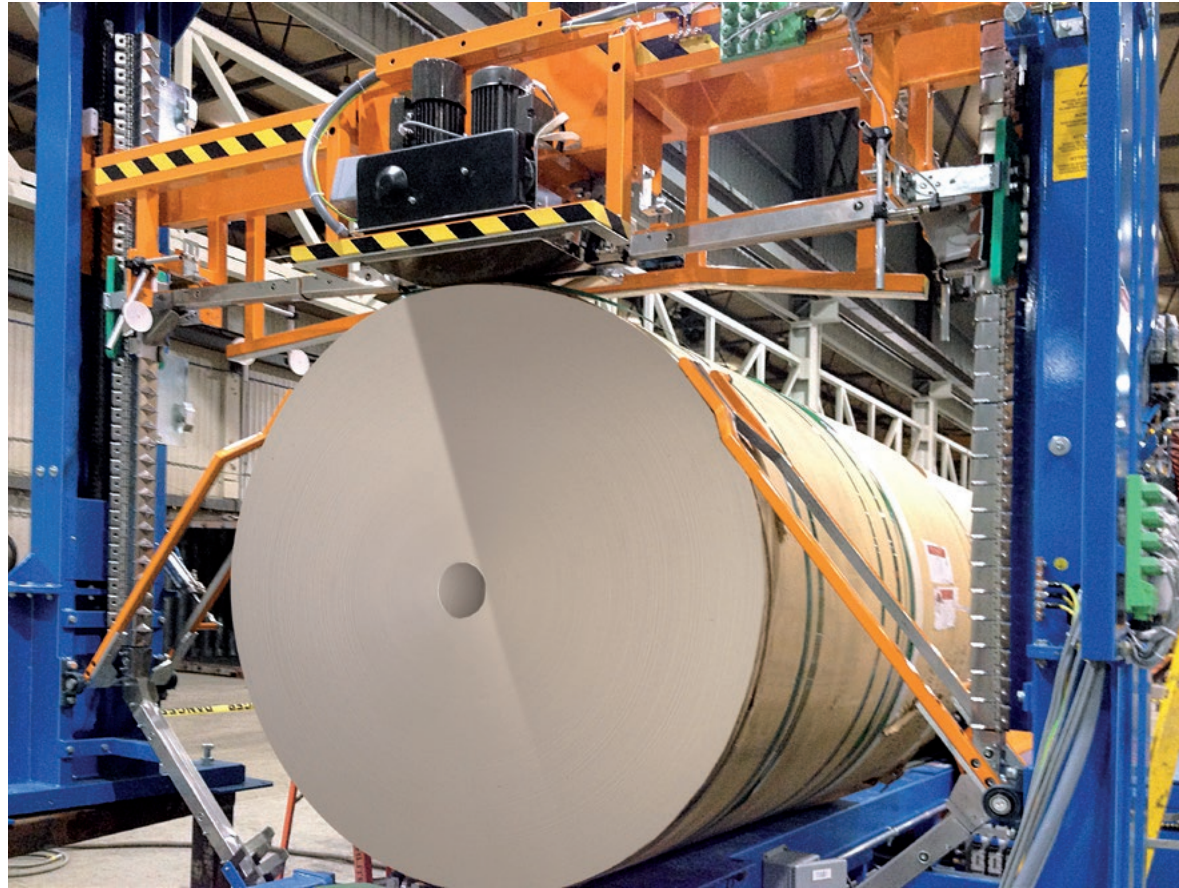

- N. 2 lances splitted in two parts due to space requirements
- N. 2 Closed lower strap guides for strapping non-palletized goods
- Automatic system to apply flat cardboard protection on top/bottom edge of the loads
- Compression device; pressing power up to 3000kg controlled by loading cell
- Diagnostic system for easier accessible human machine interface

Light compression strapping machine with single head for boxes on pallet with a top compression up to 1500kg.

PAPER ROLLS

Circumferential strapping machine for paper rolls equipped with side and bottom strap guide devices for the precise positioning of the strap on the products

PACKAGING LINES

Automatic packaging line for paper sacks or cardboard with and without pallet. The displayed project is equipped with roller conveyors system, centring device station, double head top compression strapping machine, turning table to make cross strapping, automatic stretch wrapping machine and unloading conveyor sections. Each line is equipped with safety fences and light barriers
