

LVL production technological process

Forming Machine

Cold Press

Forming&Cold pressing Section

LVL production line is a new type of wood-based panel made of small-diameter logs and low-quality logs as the main raw materials, Then combining and gluing.

Hot pressing Section

LVL not only retains the natural characteristics of wood, but also has characteristics that log does not, including low variability in strength, large design space, and good dimensional stability.

It can be used in construction, decoration, furniture, automobile and train carriage panels, container carriage panels, LVL can also be used for joists and sleepers.
