APP Thundercut

Technology at your fingertips

SCM Thundercut is the Optimizer/Sequencer App for mobile devices that allows to optimize the panel surface and guides the operator through the cutting sequence.

High cut speed execution, less material waste and mistake odds minimized, even for not skilled workers!

Download it now from the AppStore and Google Play:

SCM Thundercut

You can manage your circular saws fleet, the material warehouse and many project you are working on.

The 3D sequencer, thanks to its simple and clear design, suggest the ideal settings of the machine for every single cut to be executed.

The App is available for circular saws, circular saws with movable blade unit, saw-shaper combination machines and universal combination machines (you will find the QR code to activate the App in each new machine).

SCM CLASSICAL MACHINES, QUALITY EVEN MORE GUARANTEED

Since 1952, SCM has been leader in the design and production of woodworking machines.

We went beyond 70 years of company history by offering to our customers knowledge and advanced technologies that distinguish **L'invincibile**, **class** and **nova** classical machines. Different ranges united by the strength points: performance, ease-of-use and certified quality. We believe so much in the reliability of our machines to offer to our customers the possibility to have a **warranty extended up to 2 years***. An extra peace of mind for small artisans workshops and joineries who see SCM as the ideal partner to grow their business.

To activate the 2-year warranty extension, it is compulsory to register on-line the machine on the website:

scmwood.com/warranty-extension

*Check the models of machines that can take advantage of the initiative on the website:

SCM
Thundercut
Optimizer/
Sequencer App

High construction quality for reliability
and safe performance.

circular saws operating groups

always user friendly
and precise

Handwheels on the machine front

Ease-of-use in every day operation due to the dedicated gear box (**SCM solution**), fully protected from dust, that provides a smooth and direct transmission. Every minimum hand-wheel movement corresponds to a precise blade adjustment.

sturdy structure

Saw unit (class si x)

Saw unit $\pm 46^\circ$ with self-tensioning system of the transmission belt (SCM solution): performance and reliability with no compromise.

The saw blade lifting is carried out by a strong cast-iron structure with sliding on ground round slideways which guarantee the **best accuracy**. The unit tilting is carried out on cast-iron rotation sectors in a crescent shape to ensure reliability over time.

simple and effective

Scoring unit adjustment

Vertical and horizontal adjustments are carried out by user-friendly mechanical levers that operate directly making precise and smooth movements. The useful mechanical stops allow immediately finding of the set position. The positioning of the controls allows their use without moving from the front of the machine.

maximum cut quality guaranteed over time

Sliding carriage

The carriage will never require adjustment due to its closed reticular geometry with steel guides using an **exclusive method of mechanical fixing**.

Furthermore, the **"arc" profile of the class arch-ground steel slideways (SCM solution)** ensures:

- No play and loads four times higher than others
- $\pm 0,05$ mm tolerance on the entire carriage length for straight and high quality cutting
- Sliding effectiveness over time, thanks to the particular guides positioning which ensures protection from dust

reliability and technology without comparison
10 years of SCM guarantee for the carriage sliding system.

smooth and rapid
positioning

Rip fence

Movement of the rip fence support on round bar with micrometric adjustment. The support can be also equipped with electronic readout for fence position with detecting system on magnetic band (option). The fence can be easily excluded from the working area when it isn't used.

optimal support

Squaring frame and fence

Panel loading is easy on the large squaring frame with an idle roller at the end and the mobile cross beams offer an **optimal support** also to smaller panels. The telescopic squaring fence with the inclined metric scale and two reversible stops can be used to square panels measuring 3200x3800 mm and for tilted cuts at up to 45° on both sides of the frame.

programmable circular saws electronic controls

Technical specification at page 21

the practical advantage for
automatic control of the
main positions

"Ready"

The **programming** of the work becomes
simple and effective with the electronic
control with a 4" LCD display.

- Working mode: manual, semi-automatic and automatic with a memory capacity of up to 99 programs
- Tool data setting with automatic height adjustment
- Calculator and hour counter

(option)

Blade speed
readout

the pleasure of controlling all machine
functions from the control panel

"eye-S" console

The mobile control panel is fitted with "eye-S" console that, thanks to an articulated support arm, can be oriented horizontally for the best operator's comfort during the programming. The electronic control allows easy and intuitive machine programming, combining the 10" colour touch-screen display and the **Maestro** active user interface.

Main functions:

- Connectivity among machines belonging to the same company network and **4.0 Industry** preset
- Sharing of work programs and tools database
- Activity monitoring and reporting on the use of the machine
- Connectivity with **SCM Thundercut** (optimizer/sequencer App)
- Self-diagnosis, tele-service and link to troubleshooting

one cut only, the correct one

Operator's assistance

The electronic control suggests to the operator information for the correct use of any cutting configuration. It is possible to create the required work-piece with maximum accuracy and without any calculations or cutting tests even with the most complicated of cases.

The electronic control can manage the
inverter for the adjustment of the saw
blade rotation speed and the
scoring unit alignment.
Only for eye-S version

the innovation at the
operator service

**Automatic positioning system
of the overhead protection**

The overhead protection automatically
positions itself as a function of the blade using
the exclusive **"AP system" (SCM solution)**.

This makes the transition from cuts with
different angles even faster and safe, without
the operator having to change the
settings of the machine.

(class si x)

maximum practicality

**Programmed rip fence with
movement on sturdy round bar
and sliding on steel cable**

Electronic readout for
fence position with
detecting system
on magnetic band.

Only for Ready 3 version

quick and accurate positioning

Programmed rip fence with movement on a recirculating ball screw mechanism and sliding on linear guide

The fence can be easily excluded from the working area when it is not used.

Only for Ready 3 Plus / eye-S

circular saws main optional devices

Fences for angular cuttings

Available for the following versions

- a) traditional
- b) with automatic self-adjustment of the stops position in respect of the blade
- c) with automatic self-adjustment of the stops position in respect of the blade and digital readouts for stop position and rule tilting angle

Fence for parallel cuttings

The exclusive referencing system for the first trim cut allows the setting of trim quantity to be cut for every **side without any test cuts**. Available also with digital readout.

Squaring frame with "Compex" device

With automatic self-adjustment of stops position in respect of the blade and rule tilting angle. Furthermore, thanks to the dedicated frame structure, it is possible to carry out tilted cuts keeping the squaring rule comfortably within the operator's reach, both in acute cuts and in obtuse ones, without renouncing to a valid support of the work-piece.

Fence for complementary cuttings

Device to be applied directly on the squaring rule that allows to quickly carry out cuts with angles complementary to the rule one.

Squaring stops with lens

For a better view of the data.

Digital readouts on the squaring stops

The stops can be easily read even from distance.

Control push-buttons integrated in the sliding carriage

The possibility to start or stop the blades motors from the push-buttons located at the ends of the carriage considerably helps when machining large dimensioned panels.

1

Squaring frame with "Quick Lock" fence

Minimum set-up time with the **SCM system** that allows **rapid fence positioning**.

The extending roller and the stronger frame support maximise performance.

2

3

4

circular saws main optional devices

Surface reinforcement treatment
for sliding carriage and mobile crossbars of squaring frame.
Dedicated to the intensive processing and
particularly abrasive materials.

Extension with roller conveyor on parallel fence side,
for the support of large panels, and tools-holder
to have the tools always within reach.

Laser device
Laser light for the work-piece
alignment with the cutting line.

Arrangement for "DADO" machining
Possibility of using a
tool (not included)
to replace the main blade,
with 203 mm maximum
diameter and 20 mm
maximum thickness.

circular saws main optional devices

Tablet holder on the sliding carriage
Compatible with tablets from 8" to 11".

Adjustable tablet holder positioned on the mobile control panel
Compatible with tablets from 7" to 13".
It is equipped with USB port for power supply positioned on the mobile control panel.

circular saws main optional devices

"Pro-Lock"

System for the main blade rapid locking with fast and tool-less riving knife adjustment.

Expandable scoring blade

Manually expandable with variable thickness from 2,8 to 3,6 mm.
Blade diameter: 120 mm (160 mm for *class si x*)

Blades-holder drawer integrated in the machine's frame

It is made of 4 shelves, customizable with labels, for the easy replacement of the blades.

"LED indicating scoring blade unit in operation" device

When the scoring blade is working, the high efficiency LEDs clearly indicate the danger area, making the machine safer than ever.

Pneumatic presser on entire carriage length

Particularly suitable for the cutting of thin materials.

Second extension with sliding rail support

to safely support panels for large dimension and weight.

Advanced materials machining

PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials. Corian and other composite materials. Aluminium, brass and other light metals.

Device for the blade micro-lubrication

Compulsory for the machining of light alloys, extremely useful with particular plastic materials.

Barriers
reliability and safety

Feed Belt
accuracy and efficiency

Saw Blade Shaft Sleeve
rapidity and effectiveness

Practical, accurate,
reliable and above all safe.

class m 3 operating groups and main devices

reliability and safety

Anti-kickback finger barriers

The SCM multiblade rip saw is equipped with 4 anti-kickback finger barriers: three top and one bottom and a chip deflector screen between the three top barriers.

accuracy and efficiency

Feed belt

The machine has an extremely substantial feed belt which is directly driven through its robust belt links. Unwanted movement of saw blade shaft sleeve is prevented by the aggressive surface of the feed belt and the 4 pressure rollers (2 in front and 2 behind the blades). These advanced features ensure maximum straightening and excellent cutting quality, minimizing the quantity of stock removal in successive machining.

practical and easy to use

Set-up

Setting up operations can be carried out rapidly: the adjustment of spindle, pressure rollers and feed speed is carried out by hand wheels according to graduated scale and direct reading. The infeed fence is fitted with selflocking lever which can be operated single-handed. The centralized control panel is equipped with ammeter to enable operator to obtain maximum output without motor stress.

rapidity and effectiveness

Saw blade shaft sleeve

It can be quickly fitted into spindle and easily locked with a special key. The conical coupling of the saw blade shaft sleeve with the base of spindle ensures longer blade life and higher output.

Laser

Laser beam cutting line reference.

Some typical uses:

- extraction of irregular planks, without using fences
- selection of clear parts of planks with knots and fissures (option)

Surface Fence
high rigidity

Interchangeable Rollers
for every requirement

SCM Cutterblock
simple and rapid

Easy to use and precise, stylish with practical design, a wider range of applications.

planers operating groups

high rigidity Surface fence

High rigid fence with a smooth movement thanks to the **central locking on round bar**. The graduated scale facilitates the operator in positioning the guide to the required tilting.

constant precision over time

Feeding on connecting rods

Very accurate machining with the movement of the infeed table by means of a parallelogram **kinetic mechanism** which **always gives the same distance between the cutterblock and the table**. The system operating directly on the connecting rods avoids any exertion to the table assuring constant planarity over time.

perfect joints every time

Concave-convex function

The available settings allow **perfect bonding** of the components giving excellent coupling and eliminating any joint line.

perfect finish

Feeding rollers on connecting rods

The stopping of the work-piece and the presence of notches on its surface are eliminated due to the movement system on all three rollers, that allows their vertical displacement by rotation and the **best linear feeding**. Perfect surfaces and high feeding performance with the standard rubber rollers.

simple and rapid

SCM cutterblock

The cutterblock is made from a single block of steel ensuring complete stability even under heavy dynamic loads.

solutions for every requirement

Interchangeable rollers

Perfect finish obtained by quick and easy changeover of the rollers that allows the operator to configure the machine drive function in case of special requirements, such as a minimum removal of fine wood and/or batches where multiple pieces of different thicknesses are processed.

Powered worktable lifting with micrometric adjustment and digital readout.

Feed speed controlled by inverter from control panel and dedicated warning light to indicate to higher speed.

The 4 screws with a large diameter combined with the 2 side linear guides ensure worktable stability. The integrated protections guarantee high precision and reliability over time.

Pneumatic load adjustment on the rollers for the best finish and effectiveness of the feeding of any material and in any working condition.
(option)

planers main optional devices

"Xylent" spiralknife cutterblock
The 3 spiralknives give an exceptional finish. **Reduced noise** during machining provides a more comfortable working environment. It also improves the dust extraction due to the **production of very small chips**. Each cutter has 4 tips which can be rotated into the cutting position when worn. Therefore, increasing the production life of the cutter block before knives require replacement.

Maintenance case for "Xylent" spiralknife cutterblock

It includes:

- 1 cleaning/degreasing liquid bottle for the resins cleaning
- 1 set dynamometric key - 2 bit Torx
- 10 inserts - 5 screws - 1 brass bristle brush to clean the spindle with mounted in inserts - 1 steel bristle brush to clean the inserts housings

Additional overturning fence

Integrated in the surface fence, it ensures perfect operator safety when machining small dimensioned work-pieces.

"Tersa" monoblock cutterblock

The cutterblock is made from a single block of steel ensuring complete stability even under heavy dynamic loads. Automatic knives clamping by means of the centrifugal force ensures safe and precise machining. The system, without fixing screws, makes knives substitution extremely fast.

"Smart Lifter" integrated protection
The protection system, **developed by SCM**, is perfectly integrated into the machine base for **maximum protection** while excluding any hindrance or obstruction in the work. The protection with automatic vertical, horizontal and tilted movements **provides complete coverage of the tool** before, during and after machining.

Thickening table extension to be used in infeed or outfeed

It can be installed on the worktable end side.

Outfeed extension for the thickening table

A single operator can easily move very long panels or introduce a second one without going to the outside to stop the first one.

Advanced materials machining

PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials.

Outfeed rollers in sandblasted steel

For a perfect post-processing finish.

Special rollers

The **sectioned steel roller (a)** and the **dual-density rubber roller (b)** allow the simultaneous processing of different thicknesses giving great results even with minimum removal. With the dual-density rubber roller, the edges are not damaged even when the work-pieces are not perfectly aligned. Suitable also for upgraded woods and/or thin thicknesses.

a

Thickening table with idle rollers

It enables the feeding of moist and/or resinous wood. Particularly suitable for heavy duty woodworking operations and with rough work-pieces.

Spindle Moulder Unit
sturdiness and versatility

Spindle Moulder Fence
set-up rapidity

Machine Versions
specialisation and professionalism

Precision and reliability in unbeatable time.

spindle moulders operating groups

easy to use

Adjustable spindle moulder fence

A handle provides the setting-up of the infeed table, which effects the removal and it is verified by an index on a metric scale.

sturdiness and versatility

Spindle moulder unit

Maximum stability and rigidity in all working conditions, thanks to a

large spindle moulder column made entirely of cast iron.

The spindle is surrounded by a cast iron "cup" to protect the internal mechanical components from shavings and sawdust. The 5 standard speed are ideal for any type of machining, from profiling to moulding and tenoning, with the possibility to fit large diameter tools.

the best support for the worktable

"Fast" sectional table

Provides support for the work-piece being machined close to the tool, allowing the adjustment with mounted tools and the very best quality finish when machining narrow pieces. The extremes in machinable material eliminate the disadvantages of a possible collision with the tool.

maximum set-up speed and ease-of-use
Spindle moulder fence with mechanical programming
 No more test runs due to digital readouts (a) that ensure accuracy to a tenth of a millimetre in positioning the two worktables. The side handles (b) make it easy to remove and reposition the fence from the worktable.

automatic and removable
"Flex One" spindle moulder fence
 Automatic adjustment of the entire fence according to the tool diameter. User-friendly worktable exclusion system with precise re-positioning.

machining with tools on the spindle head carried out with the "Flex" fence
 The spindle moulder fence can be located behind the tool allowing the performance of "head" routing using small diameter tools, typical of a router or portable electric tools; all this in compliance with CE safety regulations.

engraving,
 grooving,
 mortising

immediately in the correct position
"Flex" system
 A single, simple movement to retract and re-position instantly and accurately the position of the fence on the worktable with such precision that no other control is necessary.

spindle moulders machine versions

class tf 130ps
with front sliding carriage
Designed to manage tenoning operations very easily.

"LL" versions with worktable side extensions
Ideal when machining very long work-pieces due to worktable extensions. The mobile front bar makes it easy to move large dimensioned work-pieces on the worktable, particularly for edge profiling.

Carriage on worktable for small tenoning operations
Ideal for tenoning of small work-pieces for the versions without sliding carriage. Mitre cuts with angles of $\pm 60^\circ$ on the worktable are possible. Easy fitting and removal due to the fixing system on the worktable.

"TL PRO-10" versions

The manual feed carriage is a cast iron structure running on linear slideways with recirculating ball screws, guaranteeing maximum machining precision and stability.

The "PRO-10" tenoning table can be retracted easily and within a few seconds to leave the machine ready for profiling (a) or moulding (b) operations.

For a total safety and a higher flexibility, the machine is supplied, as standard feature, with a **special protection hood** for moulding operations.

"TL" versions

Top machining precision and stability due to the manual feed carriage with castiron structure mounted on axial bearings running on slideways made from hardened and ground bar.

spindle moulders electronic controls

Technical specification at page 49

the pleasure of controlling all machine functions from the control panel

"eye-S" console

The mobile control panel is fitted with "eye-S" console that allows easy and intuitive machine programming, combining the 10" colour touch-screen display and the **Maestro** active user interface.

Main functions:

- Connectivity among machines belonging to the same company network and **4.0 Industry** preset
- Sharing of work programs and tools database
- Activity monitoring and reporting on the use of the machine
- Self-diagnosis, tele-service and link to troubleshooting

"Ready"

The programming of the work becomes simple and effective with the electronic control with a 4" LCD colour screen. Working mode: manual, semi-automatic and automatic with a memory capacity of up to 99 programs.

Tool-holder shaft lifting

Adjustment of the entire profiling fence

Tool-holder shaft tilting

Tool-holder shaft speed readout

For the most recurring machining jobs it is possible to set the dimensions of the required profile and select the tool to be used.

Powered operating unit movement with digital readouts.
Maximum precision and ease-of-use.

The electronic control can manage the inverter for the adjustment of spindle rotation speed.
Only for eye-S version

spindle moulders main optional devices

Feeder support device

High usable flexibility and no use of worktable space, due to the cross device on the column support of the overhead control panel. The positions are made extremely simple using handwheels with digital readout.

"T-Set" rapid tool locking

A simple compressed air gun allows the tools locking and unlocking when the interchangeable spindle is present.

Advanced materials machining

PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials.

THE STRONGEST WOOD TECHNOLOGIES ARE IN OUR DNA

SCM. A HERITAGE OF SKILLS IN A UNIQUE BRAND

70 years of success gives SCM the centre stage in woodworking technology. This heritage results from bringing together the best know-how in machining and systems for wood-based manufacturing. SCM is present all over the world, brought to you by the widest distribution network in the industry.

70 years history

3 main production sites in Italy

300.000 square metres of production space

20.000 machines manufactured per year

90% export

20 foreign branches

400 agents and dealers

500 support technicians

500 registered patents

In SCM's DNA also strength and solidity of a great Group. The SCM Group is a world leader, manufacturing industrial equipment and components for machining the widest range of materials.

SCM GROUP, A HIGHLY SKILLED TEAM EXPERT IN INDUSTRIAL MACHINES AND COMPONENTS

INDUSTRIAL MACHINERY

Stand-alone machines, integrated systems and services dedicated to processing a wide range of materials.

WOODWORKING TECHNOLOGIES

TECHNOLOGIES FOR PROCESSING
COMPOSITE MATERIALS, ALUMINIUM,
PLASTIC, GLASS, STONE, METAL

INDUSTRIAL COMPONENTS

Technological components for the Group's machines and systems, for those of third-parties and the machinery industry.
