

Product Description

**European
Standartization
Bioproduct**

PM Biopolymer is a cutting-edge thermoplastic resin derived from starch-based waste such as bread and pasta. A highly environmentally friendly solution, PM Biopolymer significantly reduces dependence on petroleum-based plastics while also recycling starch-based food waste. Unlike conventional plastics based on exhaustible petroleum resources, PM Biopolymer is a sustainable alternative that offers similar physical and mechanical properties. With its exceptional bioplastic qualities, PM Biopolymer is a game changer in the plastics market.

Compatible and can
be recycled
alongside other
materials

Production process
compatible, no
extra investment
required

Complies with
the quality
standards of
companies
