在碰撞面做了外涂层处理，材料选用进口涂层材料，创意点参考了汽车密封条表面处理工艺，主要优势体现于：

- 1: 处于长期开关门的碰撞，表面涂层有非常优秀的耐磨防划伤效果
- 2: 涂层处理以后，表面触感会非常爽滑，在高温情况下依然会有光滑的触感，不会有其他材质的黏连
- 3: 材质基材硬质部分为改性PP（硬度高），软质材质为三元乙丙橡胶，TPV材料，产品颜色任意，选择多元化
- 4: 此工艺借鉴于汽车密封条工艺特点，有着优良的耐磨性、耐候性、持久的回弹性

The collision surface is treated with an external coating, using imported coating materials and referring to the creative points of the surface treatment process of automobile sealing strips. Its main advantages are reflected in the following aspects:

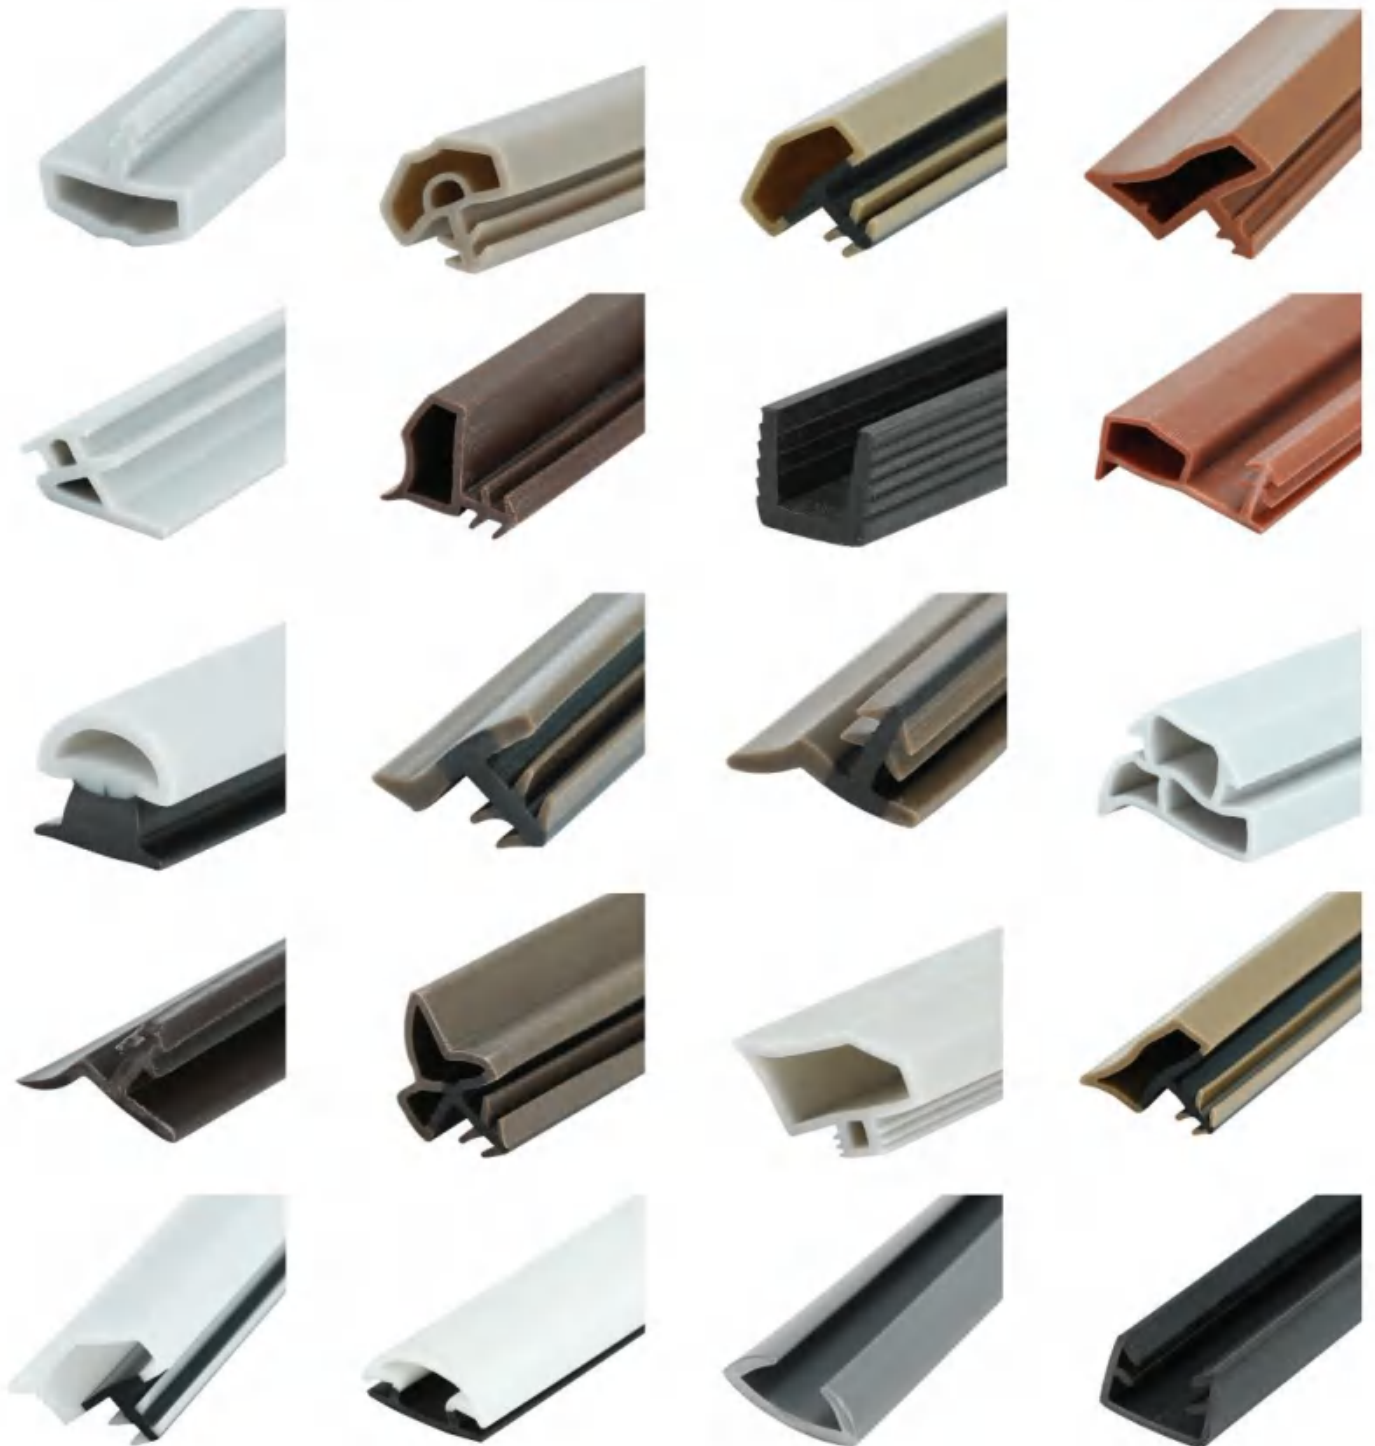

1. After long-term door opening and closing collision tests, the surface coating shows excellent wear resistance and anti-scratch effects;
2. After coating treatment, it feels very smooth and still maintains a smooth touch under high temperature conditions, and will not adhere to other materials;
3. The base material part uses modified PP (high hardness) and the soft part uses EPDM, TPV material. The product color is diversified and the choice is flexible;
4. This process draws on the characteristics of the automobile sealing strip process, and has excellent wear resistance, weather resistance and long-lasting resilience.
