● Various tips:

● Customized colors:

● Different connectors:

● How to know if intubation is expected to be difficult or not ?

Structures Visualised	Grade 1	Grade 2	Grade 3	Grade 4
Pre-anesthesia				
Pharyngees (mallanpati)				
If > 2 Mallampati risk of DI due to bad visualisation of vocal cords				
Laryngoscopy				
Laryngees (Cormack & Lehane)				

Bougies device used in case of difficult intubation (Cormack superior to 2):

- Standard procedure recommendation for difficult intubation is to use as first intent long and flexible guides.
- This technique is very effective. According to several studies, the bougies treat more than 96% of difficult intubations.
- The bougie is the first intent device in the case of difficult intubation.
