INTELLIGENT SERIES WELDING PIPE EQUIPMENT

Intelligent series welding pipe unit is the main equipment for the production of stainless steel pipe in metallurgy, building materials, light industry, chemical industry, medicine, petroleum, automobile and other industries.

MAINLY USED IN:

Industrial pipe, health pipe, medical pipe, food pipe, aerospace pipe, ship pipe, etc.

PRODUCT FEATURES:

Based on the high-end intelligent series welding pipe equipment, the production line adopts an innovative integrated gear box design. The design greatly improves the stability of continuous production, with less noise and faster running speed. Adopt man-machine interface control, full automation, machine durable and high precision, continuous production, high efficiency, low cost, finished product rate of 98%.

PRODUCING PROCESS

Coil feeding rack → Forming → Inner welded bead treatment → Grinding → Premier sizing → Bright annealing → Whole forming → Straightening → Slitting/cutting → Unloading

智能水管机
 Intelligent pipe making machine

更快 更稳 更强
Faster, Stronger, Stabler
