Colin Kimya Sanayi ve Ticaret A.Ş.

Founded in 2000 in Istanbul, Colin started its journey with the principle of producing specialized products, adopting the mission of becoming a leading chemical company in its field. Since its establishment, the company entered the sector by manufacturing textile auxiliary chemicals and is now managed by an experienced team specializing in the production of biochemical solutions.

Product Development and R&D-Focused Activities

In 2015, Colin began producing biochemical solutions under its own brand, and since 2020, it has continued production with dozens of products developed entirely by its in-house Colin R&D team. The company specializes particularly in testing, analysis, washing, preparation of environments, and sanitization solutions.

Competence in the Medical Field

Colin operates in the medical field under the title of "authorized medical device manufacturer" granted by the Ministry of Health. Its products are registered in the Ministry of Health's Product Tracking System (ÜTS) and are offered to hospitals, clinics, and test laboratories either directly or through sub-dealers.

Strong R&D Infrastructure

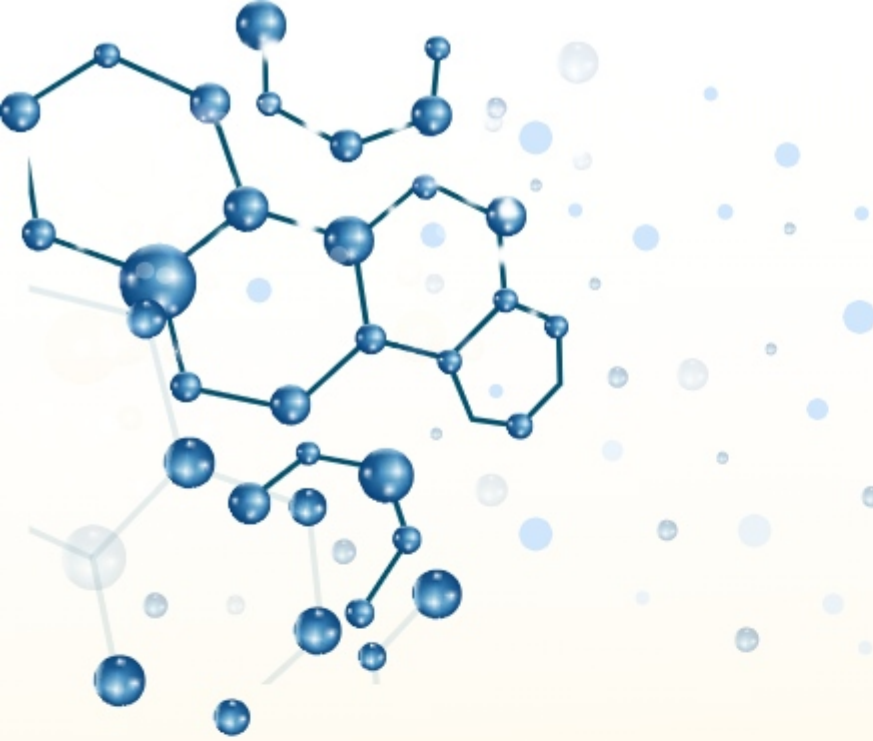

With its robust R&D infrastructure, Colin consistently demonstrates the ability to respond rapidly to market demands. The company contributes to the sector by producing universal-quality equivalent products compatible with various device groups used in medical testing and analysis laboratories. Colin's R&D team works intensively to develop new products.

Scientific Contributions and Collaborations

Colin actively participates in national and international congresses through scientific and sponsorship support and collaborates with Turkey's leading academics. These scientific partnerships play a significant role in enhancing the quality of the company's products and introducing innovative solutions to the sector.

Colin continues its vision of delivering top-tier service to its customers by combining innovation, trust, and quality. Join the Colin family and step confidently into the future shaped by science.
