sunpack® and Advantages

poşetran , exports to more than 20 countries across the region with the aseptic cardboard production started 10 years ago building on its long established past and vast experience and offers premium services to its customers with its leading role in the market. **sunpack** aseptic carton is used without any changes made in all aseptic filing systems.

sunpack became the most common type of packaging as it is suitable for cold distribution of fruit juice and milk to distant locations; handling of product avoiding nutrition loss without preservatives or additives; and placing them side by side for storage.

Advantages

- Very close to the entire region thanks to its strategic location. (Middle East-Europe-Africa)
- Superior competitiveness for its customers in the market
- Reduces stock cost of its customers with fast supply process.
- Gives excellent results in any design with rotogravure printing.
- Attracts the entire market with its wide product range.
- Ensures customer satisfaction with fast technical service and spare part supply.

Aseptic Carton Caps

Our cap developed the aseptic carton box suitable for cap machines used in the filling system offers a wide range of advantages to our customers. These advantages enable the benefits on the side when the pull tab in the filling machine is disabled;
