R&D driven innovation

To meet needs and upcoming trends of today's dynamic world, we target to be more insightful and knowledgeable about the markets we serve. This helps us to use our experience and know-how for innovation and adoption of new developments. We are continuously seeking for new materials, techniques and technologies to offer advanced products and solutions for packaging needs. We fully understand the dynamics that are shaping our markets and we work together with our customers to develop new products and technologies that will add value to their business.

Passion for Packaging

extrusion

According to the packaging requirements of your product, low and / or high density polyethylene raw materials with various properties are converted to single mono-layer or multi-layer films using the co-extrusion technique. The physical characteristics of the material are produced using specific techniques in this department with the know-how, expertise and capabilities of the experienced Extrusion Team of Elif together with R&D Department.

graphic design, repro & plate making

Elif Design Team, designs and shapes the whole production process required for each product specially in order to get the best packaging for its customers' products. With its international solution partners, Elif is the pioneering company to utilize the Digital Plate Making, HD Flexo Print and other upcoming technologies. Elif aims to provide the ideal solution available for its customers together with this innovative approach, its expert team and state of the art equipments.

ink dispensing

The colors requested specifically for each project by Elif customers are automatically prepared by the Ink Dispensing System and recorded. This also ensures ink formulation and quality as the approved specification.

printing

Elif is highly regarded for its extensive experience in Flexoprinting technology.

Elif ensures continuity in high quality standards of Flexo printing thanks to close tracking of innovations in technology, fast adoption and development of these new solutions and state of the art 10 color printing machines.

lamination

Elif's competent Lamination Team and advanced lamination lines meets functional requirements of its customers like protection, lastingness, permeability and barrier, aesthetical and visual expectations, or all multi-layer film requirements emerged by regulatory concerns. Elif is capable of producing multi-layer laminated films consisting of the combination of various flexible materials with different properties using solvent and solvent-free techniques.

slitting

Elif high performance slitting lines with the capability of laser scoring and mechanical perforation meet different customer expectations for all formats.

pre-made bag making

Continuously extending its wide range of converting lines, Elif, is known as a benchmark company especially in hygiene bag production in addition to various different types of bags serving food & beverage, baby, female and adult care, household & laundry care, cleaning tissue and retail sectors.
