Print and apply systems

HERMES Q

Made in Germany

Data security in label printing

Modern manufacture sees marking systems work autonomous, interact among each other, with host computers or a plant control unit. Data security is a key issue. The integration of components, their administration and authentification are sensitive tasks demanded from the corporate IT. cab systems developed for printing and applying labels[1] provide proper features by default, fairly protecting your data in a network.

Permissions can be assigned to users and restricted by passwords.

Access to network services (HTTP, FTP, VNC, OPC UA etc.) is possible only for users with authorization. Network services can be switched on or off.

Wireless interfaces (WLAN, Bluetooth) can be switched on or off. WPA2 and WPA2 Enterprise levels of security are supported.

Firmware updates are verified for integrity before installation.

Network protocols can be encrypted using TLS/SSL. To connect securely in a network, a certificate as required is installed in the device ex factory.

Printers in a network can be authorized securely. IEEE 802.1X network standard is supported.

USB slots can be locked and access to external storage media be denied.

All the current cab printing systems are based on the same electronics and firmware.
The printer language is the same, so are interfaces and memory. Any further developed operating system or driver is available immediately on every device. Resets to default settings are PIN-protected.

[1] models SQUIX, MACH 4S, EOS 2/5, AXON 1/2, HERMES Q, PX Q, IXOR

Contents

HERMES Q

Printing labels and applying them automatically in production lines

1.1

The slim one
to print small labels

Label printer		HERMES Q2	
Printable resolution	dpi	300	600
Print speed	up to mm/s	300	150
Print width	up to mm	56.9	54.1
Label roll outside diameters	mm	205 / 305	
Label width	up to mm	58	

1.2

The universal one
An industrial bestseller, providing a wide range of accessories

Label printer		HERMES Q4.3		HERMES Q4	
Printable resolution	dpi	200	300	300	600
Print speed	up to mm/s	300	300	300	150
Print width	up to mm	104	108.4	105.7	105.7
Label roll outside diameters	mm	205 / 305			
Label width	up to mm	114			

1.3

The wide one
to print Odette, UCC and GS1 labels in logistics applications

Label printer		HERMES Q6.3	
Printable resolution	dpi	200	300
Print speed	up to mm/s	250	250
Print width	up to mm	168	162.6
Label roll outside diameters	mm	205 / 305	
Label width	up to mm	174	

Sample applications

Label rolls

All units can provide an unwinder for picking up rolls with maximum diameter either 205 mm or 305 mm.

Directions to which dispense labels

All units can be designed for providing labels either to the left or to the right.

left

right

# Orientations of assembly

All the units can be rotated vertically by at most 360° or assembled in horizontal orientation.

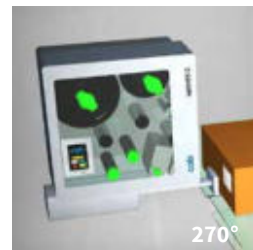

0°   90°   180°   270°   horizontal

HERMES Q in detail

1 Operation panel
Self-explanatory symbols are on display. The device can thus be operated intuitively and settings be configured easily.

2 Ribbon holder
On the basis of three-part tightening axles, ribbons can be replaced easily and quickly.

3 Rugged metal chassis
It is made of cast aluminum. All the parts are assembled to it.

4 Applicator
It is assembled to hinge pins. It can be pivoted in case of maintenance or if materials have to be replaced.

5 Pressing plungers
One is fixed near the chassis wall. The second one is pushed to the label margin, as far as necessary to evoke a good print image.

6 Print head
Units of the same width are interchangeable. Replacement requires only few steps.

7 Print roller
It can be removed/inserted quickly in cases of cleaning or wear.

8 Peel-off plate
Pivoting improves labels be applied to packages.

9 Label unwinder
A swing arm and an integral brake enable labels be unwound at constant force.

10 Liner rewinder
Subsequent to all the labels been dispensed, the entire liner tape is rewound. On the basis of a three-part tightening axle, a liner tape can be inserted and removed easily.

11 Pulling system
A liner tape is clamped between a draw roller and a pinch roller. Labels are dispensed using feed synchronous to the print roller.

12 Label sensor
Imprint is precisely set on spot on a label and materials ending detected by a transmissive or a reflective sensor.

Accurate imprint
The smaller a label, the higher are the demands regarding the accuracy of an imprint. Print offset can be reduced by ±0.2 mm using adjustable slip correction.

Print heads

Units of the same width are interchangeable.
They are detected by the CPU automatically and calibrated.
The print distance to the locating edge can be adjusted.

Major data such as the operational performance,
maximum operating temperature and heat energy
are recorded on the print head. Data can be read at the factory.

Print heads provided for HERMES Q2, HERMES Q4 - 300, 600 dpi
- sharp-edge print images
- e.g. when printing small fonts and graphics on typeplates
- e.g. when printing on materials requires high energy needs

Print heads provided for HERMES Q4.3, HERMES Q6.3 - 200, 300 dpi
persistent; when labeling in rough settings and thermal direct method

Print rollers
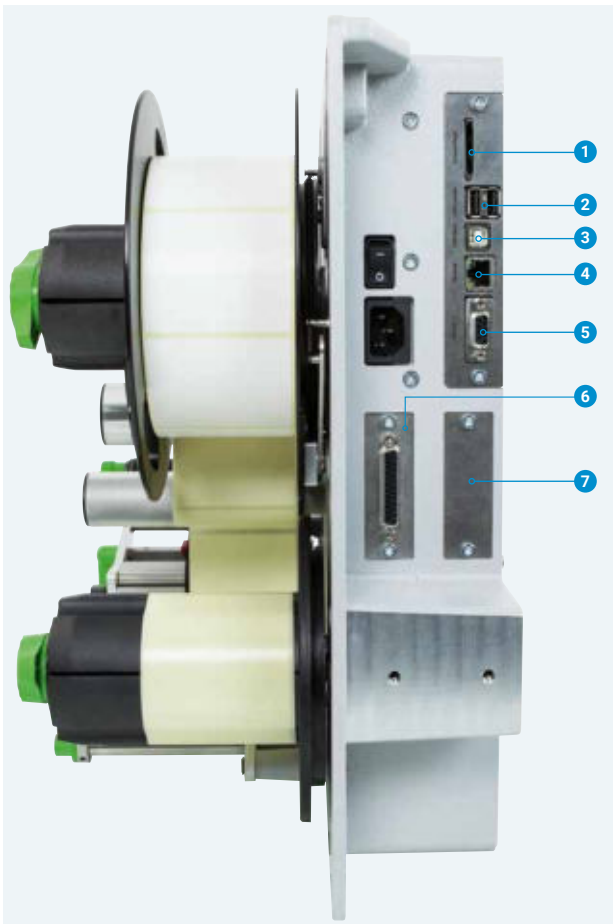

2.10

Two types of materials:

Print rollers DR
providing a synthetic rubber coating
They enable highly accurate imprint and are provided by default.

Print rollers DRS
providing a silicone coating
Product life is extra long, taken a higher print offset into account.

Interfaces

1 Slot to insert a **SD memory card**

2 **2 USB hosts** to connect a service key, USB memory stick, keyboard,
barcode scanner, USB Bluetooth adapter, USB WLAN stick,
warning light, an external operation panel

3 **USB 2.0 Hi-Speed** to connect a PC

4 **Ethernet 10/100 Mbit/s**

5 **RS232C** 1,200 to 230,400 baud /8 bits

6 **Digital I/O interface;** socket connector SUB-D, 25 pins
compliant with IEC/EN 61131-2, types 1+3;
All the inputs and outputs are isolated galvanically and protect
from reverse polarity. In addition, outputs are short-circuit proof

PNP inputs	**PNP, NPN outputs**
Start printing or labeling	Device ready
Print first label	Print data available
Reprint	Initial / upper end position
Delete print job	Paper feed ON
Label removed	Label in transfer position
Stop printing or labeling	Label application / lower end
Label feed	position
Label rotated by 90°	Pre-warning to a ribbon ending
(to be applied by applicator 4214)	Pre-warning to a label web ending
Pause	End of a ribbon and/or a label web
Reset	Collective error

Option:

7 **2 port Ethernet switch 10/100 Mbit/s**
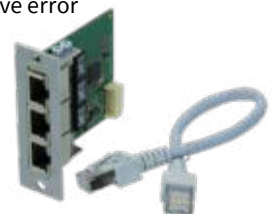

Operation panel

Self-explanatory symbols are on display. The device can thus be operated intuitively and settings be configured easily.

❶ **LED:** Power ON

❷ **Status bar**: data reception, record data stream, pre-warning to a ribbon ending, SD memory card / USB memory stick plugged in, Bluetooth, WLAN, Ethernet, USB slave, time

❸ **Printer status:** ready, pause, number of labels printed in a print job, label in transfer position, awaiting external start signal

❹ **USB slot** to connect a service key or a memory stick, to transfer data to the IFFS memory

❺ **Operation**

    Printing and applying labels in individual steps

    Jump to menu

    Reprint the latest label

    Interrupt and continue a print job

    Stop and delete all print jobs

    Label feed

**Landscape or portrait display, depending from the orientation of assembly**

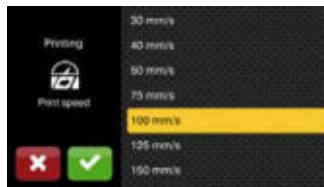

Printer rotated by 90°

Setup options

Print parameters

Print offset Y

Print speeds

Video tutorials

External operation panel

Functionalities are the same as on a printer

Landscape or portrait display

Operators are free to choose whether to instruct on an external panel or the one on the printer.

USB 2.0 Hi-Speed to connect to a printer

❶ **LED:** Power ON

❷ **USB slot** to connect a service key or a memory stick, to transfer data to the IFFS memory

❸ **Connecting USB cable**, lengths of 1.8 to 16 m are provided If length exceeds 3 m, use specified cables only. For dimensions see assembly instructions

Options

are parts or units to perform special functions. They are assembled to a printer in addition to or instead of standards.

If order implies options be assembled ex factory, the part numbers of such printers and options are added by .250. Options delivered separately are added by .001.

3.1

assembly ex factory only
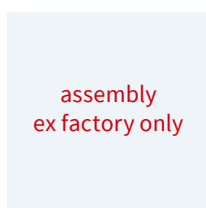

Automatic ribbon saving
Use is recommended in cases of at least 60 mm unprinted area on a label. While labels are fed, the print head is lifted and the ribbon stopped, resulting in less material consumption.

3.2

Label unwinder K40
to process label rolls having a core diameter of 40 mm

3.3

Adapter 40/50
to pick up label rolls having a core diameter of 50 mm and minimum widths of 20 mm. One adapter is sufficient if material width does not exceed 50 mm.

Operate only with a label unwinder K40.

3.4

Adapter 76/100
to pick up label rolls having a core diameter of 100 mm and minimum widths of 20 mm. One adapter is sufficient if material width does not exceed 50 mm.

3.5

Spacers
to process narrow labels provided on liners ≤ 20 mm wide, wound on a roll or a reel. Ribbon protruding on both sides prevents from wrinkling. The label guidance is therefore offset by 7 mm from the middle wall with spacers.

Reel plate wall thickness 1 - 2 mm

3.6

Margin stop 10
to guide narrow labels provided on a liner 10 - 24 mm wide, wound on a roll (no reels) having a core diameter of 76 mm.

Operate only with a spacer

Options

Cover
to prevent from contamination and contact

Maximum outside diameter for label rolls is 205 mm

If the tamp-on pad of an applicator immerses more than 25 mm, the cover must be adapted.

Assembly in vertical orientation, rotated by ± 90° or horizontally

Print head pressure system, reduced force
Thermal direct printing requires less pressure on a print head. Reduced force results in a decrease of wear. Product life extends.

Thermal direct printing only

Extended peel-off plate (+10 mm)
Recommended
- if labels are picked up by a robotic arm,
- if readable area is required for scanning,
- when installing an antistatic brush

Print roller DRS
Silicone coating enables an extra long product life, taken a higher print offset into account

Antistatic brush
Electrostatic charge is reduced when plastic labels are printed and peeled off.

Operate only with an extended peel-off plate.

Draw roller ZS
Made of steel, to avoid tension on a liner tape:
- if label height exceeds 150 mm
- when peeling off without backfeed
- if thick liner materials are processed
- when applying labels using a demand module 5114/16

2 port Ethernet switch 10/100 Mbit/s
to connect another terminal device in a joint network. Signals are looped through.

cab uses free and Open Source software in its products.
For information see **www.cab.de/opensource**

cablabel S3 software

Design, print, administrate

cablabel S3 opens up the full potential of cab devices.
Creating a label is the first step. cablabel S3 adapts to
requirements easily using a modular design. Plug-ins like the
JScript Viewer support native JScript programming, as well as
other features. The designer user interface and the JScript code
synchronize in real time. The Database Connector and other
special features can be integrated, so are barcode verifiers.

For further information see
www.cab.de/en/cablabel

Stand-alone printing

A printer can select and print labels even when the system
is disconnected from a host.

Labels are designed using software such as cablabel S3
or a text editor on a PC. Label formats, texts, graphics and data
taken from a database are transferred to a memory card,
a USB memory stick or the internal IFFS memory.

Only variable data are sent to the printer using a keyboard,
a barcode scanner, scale or another host system and/or are
recalled from a host by the Database Connector and printed.

OPC UA

The latest cab printers are ready to interact with machines
and components of different manufacturers in industrial plants.

An OPC UA server and a client are part of the firmware.

The server enables a printer be configured and controlled. Dynamic
print data can be edited using a defined programming interface.

The integral client enables reading data fields from other machines
ready for OPC UA, as well as transferring data to a label.
No additional software is needed.

Printer control

Drivers

cab provides 32 / 64-bit drivers to control a printer with software other than cablabel S3. Running the drivers requires at least operating systems Windows Vista, Mac OS 10.6, Linux CUPS 1.2.

Windows[1] drivers
compliant to WHQL standards

Mac OS X[2)3] drivers
based on CUPS

Linux[3] drivers
based on CUPS

Free download on **www.cab.de/en/support**

Programming

JScript

To control a printer, cab developed the embedded JScript programming language. Free manual download on **www.cab.de/en/programming**

ABC **abc Basic Compiler**

An integral part of the firmware, it adds to JScript in terms of programming a printer before data are edited for processing. For example, external printer languages can be replaced without intervening in the print job in process. Data may be transferred also from other systems, such as scales, barcode scanners or PLC.

Integration

SAP **Printer Vendor Program**

As a member in this program, cab developed a replace method by which cab printers can be controlled from SAP[4]R/3 using SAPScript. Only variable data are sent by a host system to the printer. Data such as pictures and fonts which had been transferred to a local memory (IFFS, memory card, etc.) before, are collected.

| Step 1	Step 2	Step 3
Create a label and a replace file using cablabel S3	Take the replace file and replace variable data using SAPScript	Printout from SAP

Printer administration

Configuration on the Intranet / Internet

cab printers integrate a HTTP and FTP server. A printer can be controlled and configured, firmware updated and memory cards managed using a standard web browser or FTP client. Administrators and operators are notified of states, warnings and errors via email or datagrams, based on a SNMP/SMTP client. Time and date are synchronized by a time server.
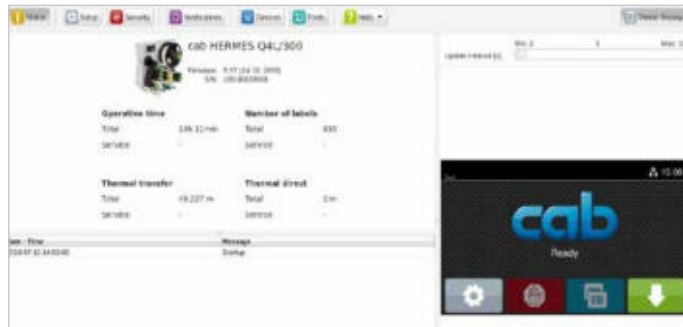

Network Manager in preparation

Several printers of a network can be controlled and configured simultaneously, firmware updated, memory cards managed, data synchronized and PINs administrated from one place.
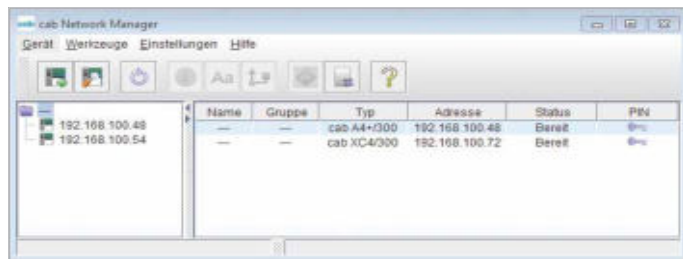

Database Connector

Printers connected to a network are enabled to access data directly from a central ODBC / OLEDB database and transfer it to a label. While labels are printed, data can be rewritten to the database.

Applicators

HERMES Q has been designed for printing and applying labels automatically in production lines. Labels are applied by applicators, using transfer modules to roll, blow or tamp labels on products or packages.

❶ Long product life
The precise and low-wear linear guide is using a ball bearing chain.

❷ Products of variable heights
Labels can be applied on different heights using a stroke cylinder. Its standard lengths are 200, 300 and 400 mm. Further lengths can be provided on request.

❸ Protective chassis
is a standard to protect the cylinder and the guide. It can be provided adapted to the product jig on a labeling workstation.

❹ Highly reliable processes
Support air and intake air can be defined, so can stroke speed. Sensor control

❺ Label application
in real time. Small or large labels, 4 to 250 mm high and 4 to 174 mm wide, can be processed using an applicator.

Pressure-reducing valve
It reduces the pressure exerted by the stroke cylinder to a product.

❻ Pivoting applicator
The print mechanics can be accessed quickly and easily in case of maintenance or if materials have to be replaced.

Applicators and transfer modules

Overview

Labels are transferred using a: Universal pad (11) · Tamp-on pad (11) · Tamp-on pad, providing a damping layer (12) · Tamp-on pad, providing a label stop (61) · Blow-on pad (21) · Form pad (88) · Universal pad, spring-mounted (31) · Tamp-on pad, spring-mounted (31) · Roll-on pad (41) · Corner-wrap pad (51) · Demand module (—) · Vacuum belt (—) · Template (90)

F — Tamp-on pad immersing in the surface along a label

For depths of immersion see the specified technical data of an applicator.

If an applicator immerses more than 25 mm, the cover of HERMES Q must be adapted.

Product marking

Swing applicator 3214

Labels very small or midsized can be applied in real time, preferably from the side.

The pad locates in front of the peel-off plate. It picks up a label while it is being printed. A rotary cylinder pivots into position. The label is transferred to a product by a stroke cylinder. Rotary angles and linear hubs are adjustable.

4.1

Accessories

5.13 **Blow tube**

5.14 **Unit to regulate compressed air**

Tamp-on pad
Labels are precisely tamped on plane surfaces. Recessed levels are possible as well.

Tamp-on pad, providing a damping layer
When applying labels to hard surfaces, the noise level is reduced. It benefits also in cases of rough structures or little unevenness.

Tamp-on pad, providing a label stop
It enables small labels be applied exactly on spot to a product.

Blow-on pad
It benefits when labels have to be applied to sensitive surfaces or products in motion. Labels are blown on by a blast of air. Stroke cylinder adjustment enables bridging distances of 5 to 10 mm to the surface of a product.

Product marking

Flag applicator 4712

Labels can be applied in real time from all sides precisely
on round materials such as cables, hoses or pipes.

The pad locates in front of the peel-off plate. It picks up a label
while it is being printed. The label is transferred to the spot of
application by a stroke cylinder. A further cylinder guides the material
all around the material using cam control. First, both endings of a label
are stuck together. Then the label is tamped to the round material.
The length of the stroke cylinder defines the maximum distance
of a product to the peel-off plate.

at the moment a label is applied	in motion	■
Label applications	from the top	■
	from below	■
	from the side	■
Package heights	uniform	■
	variable	■
Distance of a package to the bottom of the unit using a cylinder stroke of 200	up to mm	140
300	up to mm	240
400	up to mm	340
Compressed air	bar	4.5
Cycle rate[1]	labels/min approx.	25

[1] calculated using a stroke of 100 mm below the unit, labels 100 mm high, a print speed of 100 mm/s

Package marking

Demand modules 5114, 5116

Series of labels can be applied from all sides to packages in motion.
The position to which apply a label can be defined on the
dispenser tongue using a guide roller.

While a label is applied, the next one is printed simultaneously.
Make sure the speed of the conveyor belt
corresponds to the print speed.

4.10

Draw roller, made of steel
obligatory when operating
a demand module

Demand module		5114 L/R	5116 L/R
Label widths operating a HERMES Q4/Q4.3	mm	25 - 114	-
HERMES Q6.3	mm	-	46 - 174
Label heights	mm	25 - 250	
Distance of the print line to the peel-off plate	mm	400 - 600	
State of a package at the moment a label is applied	in motion	■	
Label applications	from the top	■	
	from below	■	
	from the side	■	
Package heights	uniform	■	
Distance of a package to the bottom of the unit	mm	80	
Package speeds	mm/s	must correspond to the print speed / 50 - 250 in steps of 25	
Cycle rate[1]	labels/min approx.	60	

[1] calculated using labels 100 mm high and a print speed of 100 mm/s

Package marking

Vacuum belt applicators 5414, 5416

Labels can be applied in real time from all sides
on plane surfaces to packages in motion.

The applicator locates in front of the peel-off plate.
Printed labels are conveyed by a vacuum belt
to the point of transfer to a package.
Applying a label is triggered by an external signal.

4.11
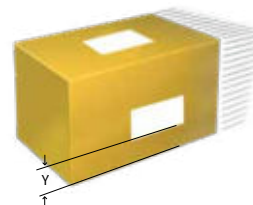

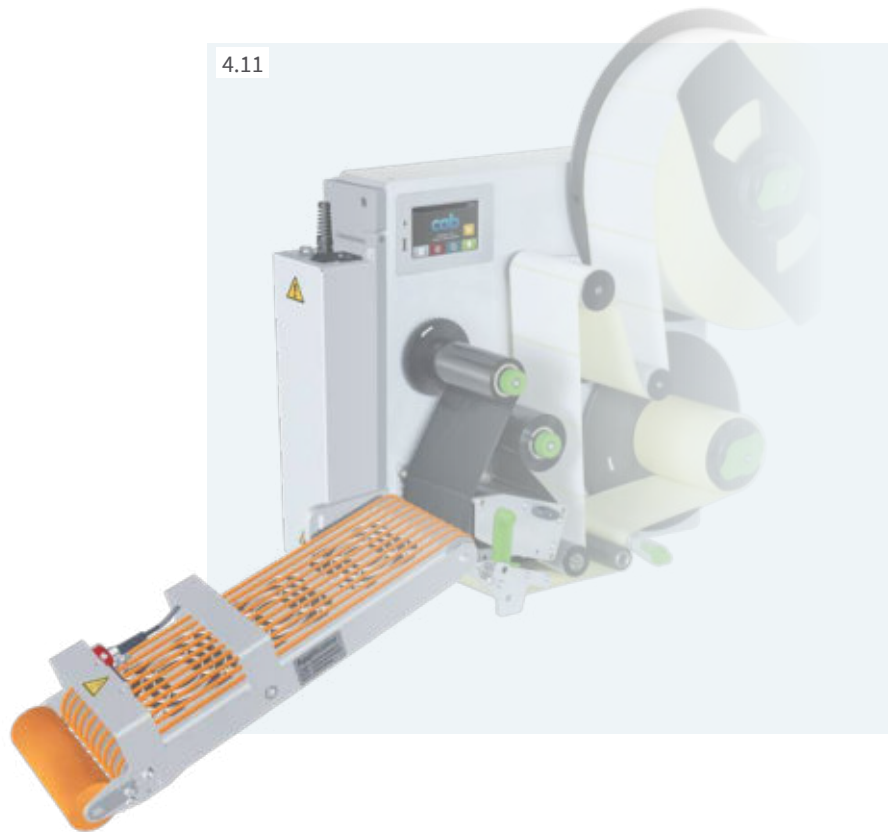

Vacuum belt applicator		5314-3	5316-3
Label applications		on plane surfaces	
Directions to which dispense labels		left and right	
Label widths operating a HERMES Q4/Q4.3	mm	20 - 114	-

	from the side	■	
Package heights	uniform	■	
Package speeds	up to m/s	0.5	
Gap between packages	at least m	0.5	
Vacuum belt speed[1]	mm/s	100 - 500	
Cycle rate[2]	labels/min up to	30	
Distance of a label to the conveyor belt, when applying from the side	mm	Y = 20	

[1] The speed of a package must be at least as high as the speed of the vacuum belt.
[2] calculated using labels 100 mm high and a print speed of 250 mm/s

Package marking

Vacuum belt applicators 5414, 5416

Labels can be applied in real time from all sides
on cylindric surfaces, or corner-wrap to packages in motion.

The applicator locates in front of the peel-off plate.
Printed labels are conveyed by a vacuum belt
to the point of transfer to a package.
Applying a label is triggered by an external signal.

4.12

Vacuum belt applicator		5414-3	5416-3
Label applications		on cylindric surfaces and corner-wrap	
Directions to which dispense labels		left and right	
Label widths operating a HERMES Q4/Q4.3	mm	20 - 114	-
HERMES Q6.3	mm	-	46 - 174

Vacuum belt speed[2]	mm/s	100 - 300	
Cycle rate[3]	labels/min up to	15	
Distance of a label to the conveyor belt, when applying from the side	mm	Y = 20	

[1] F = force required to make the vacuum belt pivot
[2] The speed of a package must be at least as high as the speed of the vacuum belt.
[3] calculated using labels 100 mm high and a print speed of 250 mm/s

Package marking

Air jet box 6114

Labels can be applied to packages in motion or at rest.
Each label is sucked by a fan and blown off by a powerful blast of air coming through aligned nozzles. Depending from the size of a label, a maximum distance of 200 mm can be bridged between a package and the peel-off plate.

4.13

Accessories

5.13 **Blow tube**

5.16 **Unit to regulate compressed air, providing a shut-off valve**
to vent a hose line subsequent to the unit;
provided in a left-hand or right-hand design

❶ **Templatee**
to cover all the holes sucking or blowing off air outside a label

By holes pre-scored on an 8 x 8 mm pattern, a template can be adapted easily to the size of a label. By sliding in a template between the suction block and rails, the surface outside a label is covered. Scope of delivery includes five templates.
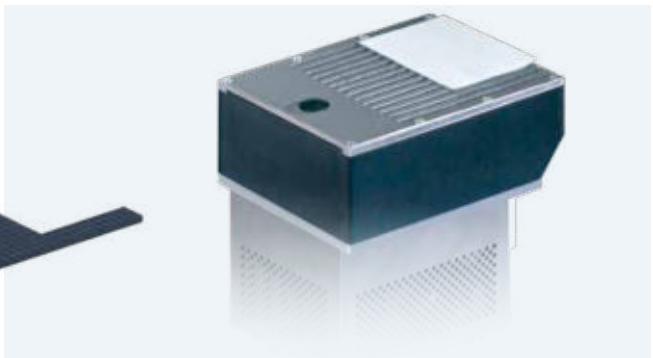

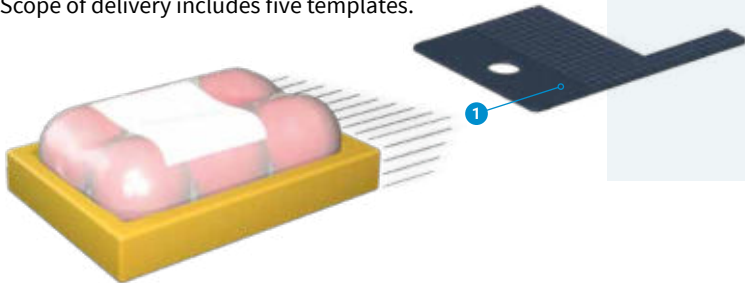

Air jet box		6114 L/R
Label widths operating a HERMES Q4/Q4.3	mm	50-114 smaller sizes can be provided on request
Label heights	mm	50-125 smaller sizes can be provided on request
State of a package	at rest	■
at the moment a label is applied	in motion	■
Label application	from the top	■
	from below	■
	from the side	■
Package heights	variable	■
Distance of a package to the peel-off plate up to mm		200
Compressed air	bar	4.5 - 6
Cycle rate[1]	labels/min up to	100

[1] calculated using labels 50 mm high, a print speed of 250 mm/s, a blast of air lasting 100 ms, with packages located 100 mm to the peel-off plate.

Accessories and options provided for applicators

5.17	Pressure-reducing valve	-	☐	☐	☐	-	-	-	☐	-	-

Blow tube
to provide support air. To assist label transfer, the label is blown from below to the pad.

Provided for 2", 4" or 6" label applications

Unit to regulate compressed air
4.5 bar default setting

Provided in a left-hand or right-hand design

Delivery includes a fine filter, a pressure control valve with a display, a hose to connect to an applicator's compressed air input and material to assemble the unit to a chassis or a bracket.

Unit to regulate compressed air, providing a shut-off valve
to vent a hose line subsequent to the unit

Provided in a left-hand or right-hand design

Pressure-reducing valve
It reduces the pressure exerted by the stroke cylinder to a product.

Designed for applicators 4014/16, 4114/16, 4214, 4414

Examples how to assemble a unit to regulate compressed air
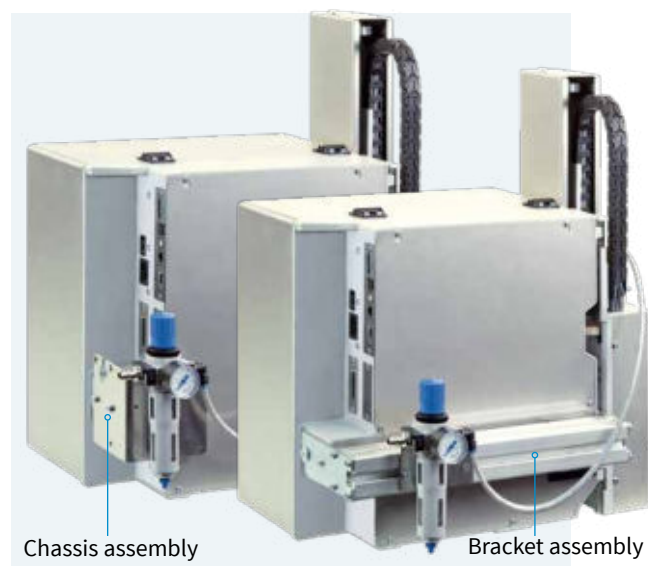

Chassis assembly   Bracket assembly

6.1
6.2
6.3
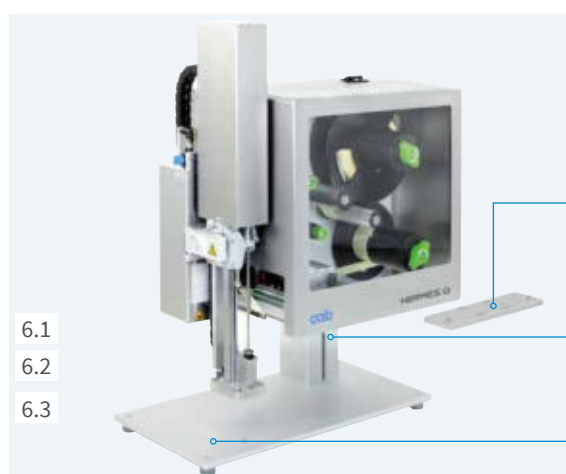

Mount
to install on a table or to a production line.
Provided in a left-hand or right-hand design

The size of the mount can be adapted to an application.

❶ **Adapter plate**
to fix a label application system.
Alternatively, it can be assembled directly to a production line, using the adapter plate with a profile.

❷ **Profile**
square aluminum; 40, 80, 120 mm are standards,
further lengths can be provided on request

❸ **Base plate**
to fix the product jig; 500 x 255 mm by default

Mounting plate
to assemble directly to a production line

6.4

Bracket
to assemble to a floor stand

6.5

Clamped joint designed for a 50 x 50 mm profile
to move in horizontal or vertical direction

6.6
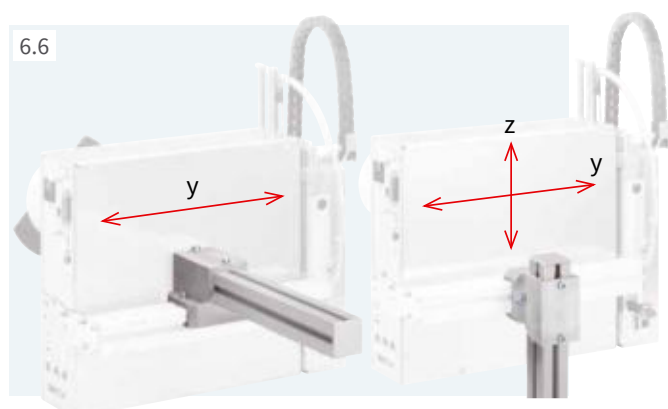

Flanged joint designed for a 50 x 50 mm profile
to move in horizontal direction or rotate around an axis

6.7
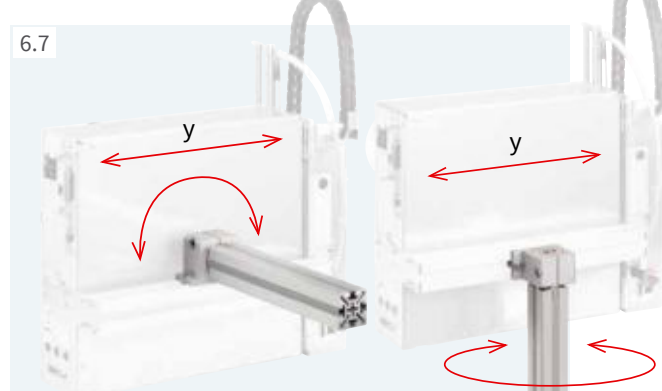

HERMES Q floor stands

HERMES Q can be installed to a production line and aligned in three axes to the product to label. Pivoting is also possible.

6.8

□ 80 mm

1,600 mm

650 mm

910 mm
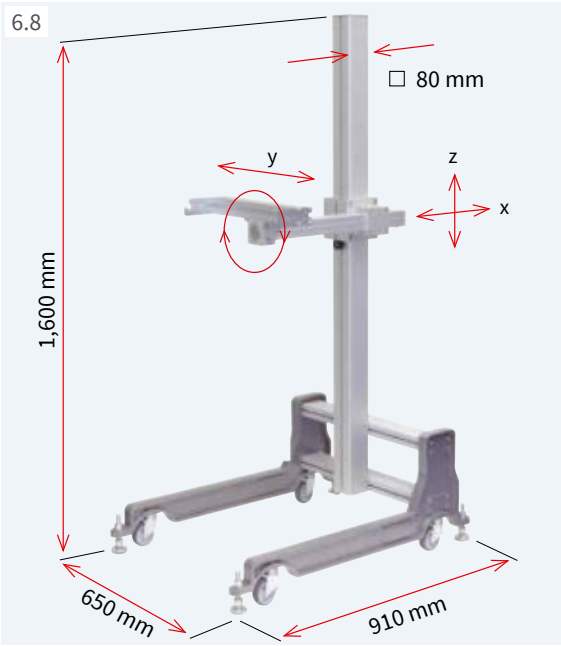

Floor stand 1601

It benefits when operating HERMES Q in different production lines. Mobility is provided. At the place of operation, the floor stand can be fixed with the help of feet to adjust.

Floor stand	1601
Base frame	castors, feet
Adjustment of heights and depths	screw clamping
Load if offset is 500 mm up to kg	50
Weight kg	36

6.9

diameter 60 mm

1,600 mm

700 mm

820 mm
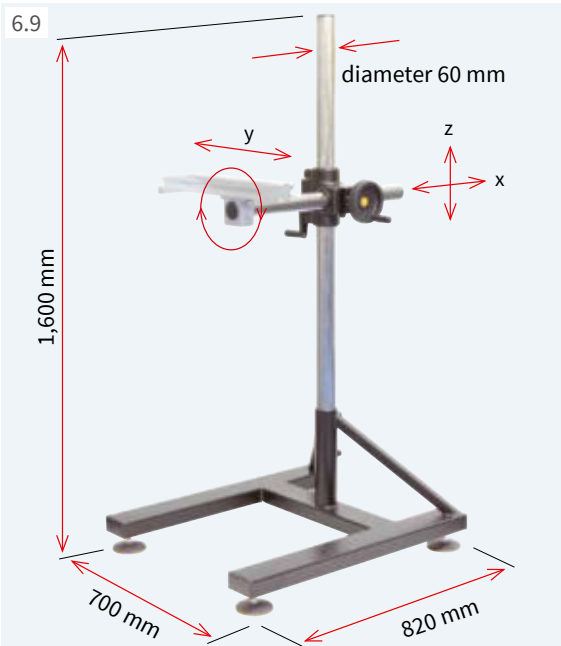

Floor stand 1602

It benefits if positions to apply labels are changing frequently in terms of heights and depths. HERMES Q can be aligned in directions x and z to a product using a toothed rack.

Floor stand	1602
Base frame	feet
Adjustment of heights depths	toothed rack, crank toothed rack, handwheel
Load if offset is 500 mm up to kg	50
Weight kg	38

Examples how to assemble to a stand

Applying labels in direction of transport
from the top   from the side
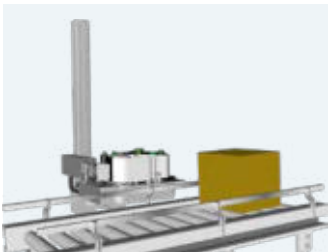

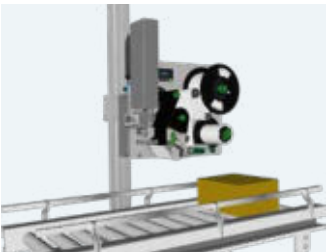

Applying labels crosswise the direction of transport
from the top   from the side

HERMES Q floor stand

6.10
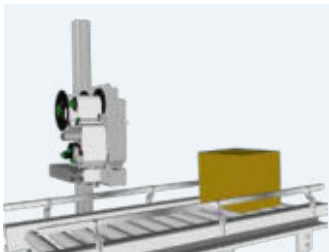

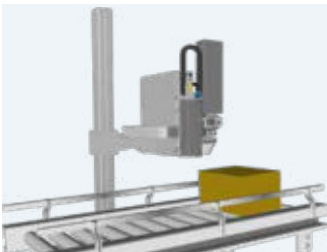

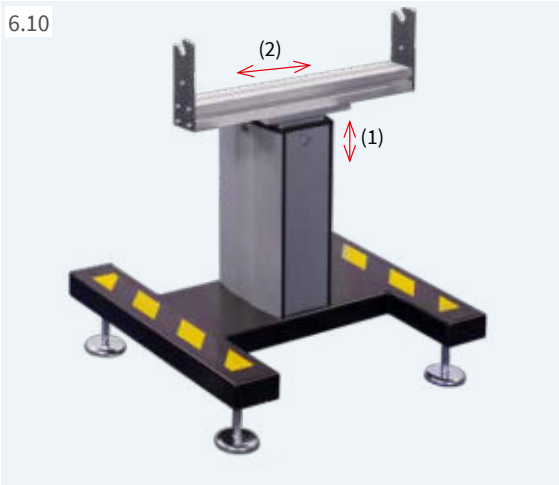

Floor stand 1201
to assemble HERMES Q horizontally in a production line.
The height can be adjusted continuous using an integral spindle.

A unit to regulate compressed air can be assembled to the bracket, so can a warning light.

Floor stand		1201
Feet to adjust	by mm	± 15
Load	up to kg	75
(1) Lower label margin-floor[1]	mm	720-960
(2) Depth along direction of transport	mm	± 100
Weight	approx. kg	40

[1] further dimensions can be provided on request

xxxxxxx - customer-specific part no. subsequent to request

Accessories and options provided for applicators

Pos.		Part no.	Designation
5.13		**5964277.001** **5964095.001** **5964614.001**	Blow tube 2" Blow tube 4" Blow tube 6"
5.14		**6010880** **6010881**	Unit L to regulate compressed air Unit R to regulate compressed air
5.16		**5984805** **5984795**	Unit L to regulate compressed air, providing a shut-off valve Unit R to regulate compressed air, providing a shut-off valve
5.17		**596xxxx.212**	Pressure-reducing valve
		xxxx - applicator part no.	

Tools to assemble

Pos.		Part no.	Designation
6.1		5965940	Adapter plate
6.2		on request	Profile (customer-specific lengths)
6.3		5961203	Base plate 500 x 255 mm
6.4		5958400	Mounting plate
6.5		5955685	Bracket
6.6		8914443	Clamped joint designed for a 50 x 50 mm profile
6.7		8914444	Flanged joint designed for a 50 x 50 mm profile

Floor stands

Pos.		Part no.	Designation
6.8		**5970113**	Floor stand 1601
6.9		**5970112**	Floor stand 1602
6.10		**5972515**	Floor stand 1201

cab product overview

Label printers **MACH1, MACH2**	Label printers **EOS 2**	Label printers **EOS 5**	Label printers **MACH 4S**

Label printers **SQUIX 2**	Label printers **SQUIX 4**	Label printers **SQUIX 6.3**	Label printer **A8+**

Label printer **XD4T** double-sided	Label printers **XC** two-colored	Print and apply systems **HERMES Q**	Print and apply systems **Hermes C** two-colored
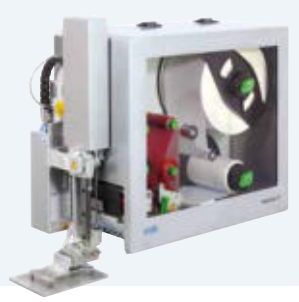

Tube labeling systems **AXON**	Print modules **PX Q**	Labels and ribbons	Label software **cablabel S3**

Label dispensers **HS, VS**	Labeling heads **IXOR**	Marking lasers **XENO 4**	Laser marking systems
