

NMT
AUTOMATION

- Pallet Stretch Machine
- Stretch Transfer Machine
- Ultrasonic Plastic Welding Machine
- Abdominal Compress Line Automation
- Automatic Chamfering Machine (5 Heads)
- Rail Connection Trifon Machines
- Aluminum Drilling Machines

Who are we?
What do we do?

Nmt automation was established in 2011 in a small workshop. Our company, which produces automatic production lines specially developed for PVC packaging machine lines and railway rail fastening bolts, carries out all manufacturing processes from the mechanical design of its machines to its software. Our company, which develops R&D machines for many different sectors, has succeeded in signing many machines that are not available in Turkey and in the world.

Our company, which has gone to specialize in the field of stretch machines in recent years, has primarily focused on producing the most robust stretch machines in Turkey.

Stretch Transfer Machine

Stretch transfer machine is a machine that transfers stretch from large diameter bobbin, called Jumbo, to smaller bobbins, and is used to create products used in many areas such as food and manufacturing industry.

Technical Specifications

- Fully Automatic Winding and Bobbin Change
- Number and Quantity Reporting
- Film and Bobbin End Sensor
- SIEMENS Branded PLC Unit
- SIEMENS Branded 7" Touch Screen
- SIEMENS Brand Motor Driver
- Mindman Brand Pneumatic System
- Cutting with Hot Wire

Ultrasonic Plastic Welding Machine

Ultrasonic plastic welding machine is a product used in the assembly and joining of non-metallic plastic parts such as iron. It is known as a quick solution method. It is frequently preferred in the industrial sector. It has gained a place in the market as an economical and environmentally friendly product. Automatic and manual models are available.

Technical Specifications

- Automatic Control Circuit controlled
- Height Adjustment System
- 2000 watt (20Khz) or 2600 Watt (15 KHz) Option
- 3 time group options (0-9999ms)
- Two Hand Button and Emergency Stop Button
- Digital Auto Calibration
- Automatic-Manual Operation Types

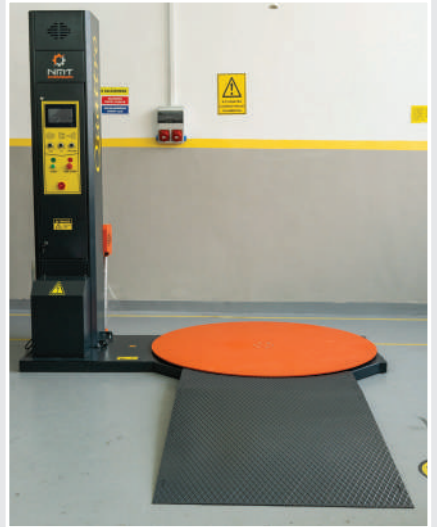

Pallet Stretch Machine

Pallet stretching machine is the machine that enables the loads on the pallet to be covered and wrapped with stretch film today. These machines, which minimize the workload, cost and the need for manpower, have recently been used very frequently.

Technical Specifications

- Motorized Pretensioning Feature (300% Savings)
- 7" Touch Screen
- 99 Different Product Memory
- Auto Height Detection
- Auto Stop at Start Angle
- Easily Transported with Forklift
- Turkish-English Screen Menus

Our Quality Policy

Based on innovative structure and technology, **NMT AUTOMATION**; It aims to provide better service to its customers by using the latest technologies and continuously increasing the efficiency of the quality system.

Our company, which produces by using the highest technology known with its engineers in the design and production department, carries out its original designs with its own **R&D department**.

At the same time, NMT Automation can always provide the best service in terms of energy saving, **time saving**, high quality and high efficiency by adding all technological developments to the machines used by its customers.

NMT Automation, which always keeps the principle of unconditional customer satisfaction in the first place and follows scientific and technological developments with its distinguished engineer staff without compromising **ethical principles**, has a mission to provide quality service to its customers. **NMT Automation**, which always provides the best service to the packaging industry with its rational, advanced technological solutions, **assertive prices**, fast and powerful services, will continue to be the leader of the industry with its high-tech products.
